

ENTERPRISE PLATFORM SPEC

DentOS Sovereign

AI-Driven Medical Tourism CRM & Clinical Platform

A premium, purpose-built ecosystem architecture designed to manage the entire lifecycle of international dental patients—from initial digital inquiry to clinical diagnostics, cross-border logistics, and long-term post-operative care.

PREPARED FOR	DOCUMENT TYPE	VERSION
Prospective Clients & Partners	Comprehensive Feature Overview	v2.4 Pro

Platform Executive Summary

DentOS-Sovereign represents the gold standard in dental medical tourism coordination. By unifying advanced clinical Electronic Dental Records (EDR) with an intelligent, automation-driven international CRM, the platform eliminates operational fragmentation, optimizes global patient acquisition pipelines, and ensures institutional-grade compliance at every touchpoint.

Operational Impact: This platform eliminates reliance on disconnected spreadsheets, manual messaging chains, and fragmented legacy systems, replacing them with a single, synchronized source of truth for clinical, logistical, and financial operations.

Comprehensive Core Modules

MODULE 01

Contextual AI Patient Pipeline

A visual, intelligent 6-stage Kanban architecture optimizing international patient acquisition and conversion.

- **6-Stage Visual Journey:** Systematically tracks global leads through strict operational phases: Inquiry, AI Diagnostics, Quoting, Logistics Booked, Pre-Surgery Arrival, and In-Treatment.
- **AI Lead Scoring:** Automatically evaluates and scores incoming records (0-100) based on critical data dimensions: X-ray availability, macro-treatment economic value, patient country tier, and algorithmic sentiment analysis.
- **Contextual Branching & Automation:** Triggers hyper-personalized workflows (automated WhatsApp sequences, deep localization emails, dynamic payment links) calibrated precisely to the patient's detected anxiety level, origin country, and distinct clinical requirements.
- **Conversion Analytics Funnel:** Maps and delivers actionable visibility over stage-by-stage drop-off rates while quantifying the exact financial recovery rates driven by targeted AI intervention workflows.

MODULE 02

Clinical EDR & Treatment Plan Builder

Fully integrated Electronic Dental Record (EDR) framework and high-fidelity visual treatment engineering system.

- **Multi-Stage Treatment Builder:** Visually models sophisticated multi-phase clinical timelines (e.g., Complex Multi-Stage Implant Journeys, advanced Orthodontics) complete with projected financial costs and physiological healing durations.
- **Medical Alerts & History:** High-visibility architectural layer displaying life-critical patient allergies (e.g., Penicillin) and active chronic medication tracking.
- **Radiology & CBCT Viewer:** A dedicated, optimized dark-mode clinical imaging gallery tailored for deep review of panoramic X-rays and interactive 3D CBCT diagnostic scans.
- **Digital Periodontal Charting:** Ergonomic graphical UI built for accelerated, precise data entry of pocket depths, gingival recession, and tooth mobility metrics.
- **Automated Patient Proposals:** Compiles and auto-generates patient-facing, clear, transparent proposal PDFs outlining localized clinical steps, payment milestones, and regulatory fine print.

MODULE 03

Travel & Logistics Coordination

Replaces unsafe manual logging tracking systems with native cross-border logistical coordination engines.

- **Flight & Hotel Tracking:** Persistently links specific arrival/departure flight data, carrier metadata, and real-time schedules alongside contractual hotel check-in/out protocols.
- **VIP Transfer Management:** Provides live dispatch telemetry for chauffeured transport fleets, managing real-time lifecycle states (Pending vs. Dispatched vs. Completed).
- **Daily Arrival Manifests:** Automated chronological data aggregations that compile arriving patients daily to construct highly secure, formatted dispatch logs for third-party transport companies and partner luxury hospitality vendors.

MODULE 04

Agency & Referral Portal (B2B)

Secure multi-tenant ecosystem explicitly designed for global medical facilitators and referral institutions.

- **Admin Commission Tracker:** Consolidated command center tracking active external agencies, gross leads generated, deep conversion metrics, and accurate multi-currency commission payouts.
- **Restricted Agency View:** Role-based, sandboxed credentialed environment enabling external agencies to monitor the current progress of their referred patients securely.
- **Pipeline Transparency:** Empowers affiliates with instant, autonomous access to treatment progression states (e.g., "Quoting" or "Treatment Completed"), completely eliminating administrative phone bottlenecks.

MODULE 05

Patient Management Core

Centralized data engine driving global and domestic patient record optimization.

- **Unified Directory:** High-performance, single-source directory indexing all active local and cross-border patient profiles.
- **Quick Filtering Engine:** Accelerated lookup parameters allowing instant data slicing by regional type (Local vs. International), workflow status, or direct string search across names and emails.
- **Communication Hub:** Rapid-access utility consolidating active contact methods, country metadata, and direct clinical scheduling history.

MODULE 06

AI Diagnostics & Automated Quoting

Next-generation automated radiological analysis and instantaneous financial modeling.

- **Instant X-Ray Analysis:** Deep-learning computer vision models that scan uploaded dental X-rays to extract preliminary clinical observations and pathological flags instantly.
- **Automated Financial Quoting:** Instantly maps detected pathologies to localized price matrices to render complete financial estimates before formal clinical review.

MODULE 07

AI Multi-Channel Concierge

Omnichannel communication hub powered by natural language classification engines.

- **Omnichannel Consolidation:** Aggregates discrete streams from WhatsApp Enterprise, Corporate Email, and Instagram Direct Messages into a unified timeline.
- **Sentiment Detection:** Scans text strings in real-time to append descriptive semantic tags (e.g., "Anxious", "Price Shopping"), auto-routing records to the appropriate specialized coordinator.

MODULE 08

Financial Core & Payment Gateway

Secure cross-border escrow generation and commercial milestone tracking.

- **Gateway Integrations:** Built-in support for international standard merchant accounts and localized multi-currency portals (e.g., lyzico 3DS) for direct, frictionless booking deposit collections.
- **Target Quotas & Deposit Tracking:** Intuitive charts visualizing gross treatment estimations against cleared, down-payment retainers.

MODULE 09

Advanced Appointment Scheduler

High-efficiency scheduling system calibrated for fluid, high-velocity clinic operations.

- **Visual Calendar Matrix:** Low-latency, drag-and-drop interactive calendar custom-configured for scheduling delicate overseas consultations, major surgeries, and post-op recalls.

MODULE 10

Compliance, Legal & Sovereignty

Ironclad, multi-jurisdictional privacy structures defending medical records globally.

- **KVKK & GDPR Ledger:** Immutable audit trails tracking explicit digital consent approvals, privacy waivers, and cryptographic signatures for international data security compliance.
- **Ministry of Health Synchronization:** Dynamic direct-sync integrations enabling seamless pushing of required clinical records (e.g., USS systems) directly to government health registries (such as e-Nabız).

MODULE 11**Analytics & Executive Intelligence**

Enterprise-level business intelligence suite for tracking global healthcare performance.

- **Clinic Performance Dashboard:** Aggregates macro KPIs including Monthly Recurring Revenue (MRR), total international patient volume, geographic distribution analytics, and top performing clinical treatments by yield.
